

# Linx connection options

Complete product control to the full array of production machines in your shop. Whether your facility decorates garments, sublimates mugs or laser engraves plaques, Linx will pull your art, scale it to size and push it thru your decorating device. Full automation for any product.

New production devices are added daily. Contact our Linx team for a complete guide to how this tool will elevate your production facility.

# linx

control system integration

Linx Control System Integration desktop software integrates your web shopping cart, phone and walk-in orders directly to your production and pushes it into your shipping application. Linx gives tracking and production control on one barcode and through one integrated system. The web application features inventory control, production analytics, purchase order generation and management as well as a product fixer.

Linx Control System Integration software web application features inventory control, production analytics, purchase order generation and management as well as a product fixer. Generate and push purchases orders to vendors as well as separate income product between build-to-stock and Print-On-Demand.

Constant analysis of production rates from all devices is displayed. A product fixer will allow for SKU communication across platforms. CSV uploads and order submission gives flexibility for additional integrations with other sources.

## Order entry and tracking

- Order capture from Shopify® or Amazon® or order capture from any open API source
- Manual order entry
- Group order information using your defined views
- SKU or product mapping using your defined automation
- Combine multiple stores into one production control center

## Art and Product control

- Linx System Integration server system
- Global access to Google Drive and Amazon Buckets
- Barcode creation and tracking
- Art file automation to size and print location
- Production mapping of artwork to product
- Production path requirements defined
- Control any product and their requirements within one system
- Automatically add cut lines for wide format printing

## Production Paths

- Synergy™ pretreat system connection
- DTG printer connection -- Brother® or Kornit® and others
- Control all product production -- including non-printed or alternate production needs
- FireFly™ curing system
- Barcode can include production requirements for units produced in any area of your facility
- Sublimation/DTF adds barcodes to seamlessly combine print with blanks

## QC and Shipping

- Connection to ShipStation®, XPS Shipper and other open API shipping applications
- Binning system tracks incomplete orders
- Binning system alert when orders are complete
- Alerts for orders with special processing
- Products with multiple print locations are tracked
- A rejected product creates a new barcode and the order is returned to production

## Analytics

- Continual tracking of production machines
- Graphic representation for quick analysis

## Order Submission

- CSV upload for integration of any data
- Web based order submission

## Order Tracking

- Linx System Integration server system
- Global access to Google Drive and Amazon Buckets
- Integration with Linx desktop application

## Build to Stock

- Place returns on the shelf to use first
- Pre print popular products to speed production

## PO Creation & Management

- Connection to your product partners
- Auto populate quantity
- Print on Demand
- Direct correlation to your orders into inventory POs and production POs.

## Production Tracking

- Control any product and their requirements within one system
- Verification of all parts of POD order

## Product Fixer

- Change any variants needed
- Fix front end data to match production data
